Table with columns for Mixed Train No. 1, Passenger Train No. 2, Freight Train No. 3, etc., listing arrival and departure times.

LODGES.

Table listing various lodges and their meeting times.

W. F. G. Shanks, city editor of the New York Tribune, has received \$2,500 in a suit against the American News Company for circulating copies of "Truth," containing libelous statements against him.

It is said that Ranier, a negro, who was Lieutenant Governor of South Carolina, and represented that State in Congress, is now working diligently on the streets of Charleston as a laborer.

During the month of March, 44,125 immigrants arrived in New York. Of these, 18,000 were from Germany and 3,000 from Ireland. The arrivals for nine months number 351,422.

An air-pressure engine has been found to answer in the underground railroad in London, and before long this method of propulsion will probably be adopted, and steam and smoke got rid of.

Lotta Darling is a clairvoyant at Lawrence, Mass., but her sight was not strong enough to discern the approach of her husband while another man was kissing her, or a fight might have been prevented.

The Rev. Mr. Tinsot of Indianapolis challenges anybody to take the negative of the following proposition in a public discussion: "Resolved, That it is right for a minister to take all the people are willing to give him."

Mrs. Louisa G. Allan, one of the most prominently connected and best known ladies of Richmond, Va., and the foster-mother of Edgar Allan Poe, died in that city on the 24th inst. When he visited Richmond, Poe always made her household his home.

The estate in Rockledge county, Va., embracing the Natural Bridge, has been purchased by H. C. Parsons, Vice-President of the Richmond and Allegheny railroad. The property contains 700 acres, and its value is estimated at \$1,000,000.

In Mississippi last year the average daily attendance of pupils in the public schools was 155,911, of whom 72,881 were white and 83,030 colored; 3,255 white and 2,314 colored were employed. Over 500,000 were paid for the public education, and laws have been enacted to provide for an increase of the fund for public school purposes.

A San Antonio correspondent of the New Orleans Democrat says railroad officials estimate that 1,000 immigrants daily are pouring through the gates of the city of Demopolis, and Texas into the Lone Star State. This is without parallel in the history of immigration, so far as the Southern States at least are concerned, and points to Texas as the rapidly-developing empire State of the South.

A New York special of the 25th to the Cincinnati Times states that Panama news just received, dated ten days ago, says: "The Treasury of Delosses' Canal Company has disappeared with \$30,000,000 in French gold belonging to the company. He went away on a tug from which he boarded a steamer. The Canal Company for a time attempted to account for the Treasurer's absence by saying that he had committed suicide, for reasons of his own, by drowning himself in the Chagres river. The truth is now, however, admitted."

Rev. Frank D. Moore, late pastor of the First Presbyterian Church of Covington, Ky., has been suspended from the office and all the functions of the gospel ministry. About a year ago Mr. Moore preached a sermon that was not in accord with the orthodox of Presbyterian sentiment on the Sunday question, and gave great offense to the "Sabbath-breakers." For this he was cited to answer before his presbytery, and in the course of the investigation which ensued Mr. Moore publicly renounced the Confession of Faith as interpreted by the Presbyterian Church in the United States, and recanted his ministerial vows.

METEOROLOGY.

The Future of Weather Forecasting.

In no other part of her wide realm has Science done so little for the good of man or her own fame as in the department of meteorology. In the solid earth her prophetic powers have long had a high place, and in the far-off heavens her empire is affirmed, but in the unstable air between these two well possessed provinces there is a region that is not yet subjected. Around the border of the domain of meteorology some gains to the cause of law and order have indeed been made; we control the lightning, we are able to trace a clearly defined storm for days on its path, and can help the sailor to knowledge that when it assails him on the deep sea; but as for forecasting the weather in any proper sense, we have not yet attained to it. Is it attainable? Can we hope to compass the condition of our days as we now mark the time of our feast or make war in weather of our own choice? This is, after all, perhaps the most interesting of the questions that the future history of science must determine. But though the perfect answer is not yet given at present, there are some things in the existing conditions of our science that makes us hopeful that we are not at the beginning of the work of weather forecasting.

There have been two distinct scientific efforts at weather forecasting, as distinguished from the forecasting of the modes of thought of ancient ages that are introduced in our ordinary weather prophecy; that undertaken by Admiral Fitzroy, in England, and that begun in this country by the United States Signal Corps, under the control of the late General Myer. Both of these have made their basis of the simple principle that if a man could write, or even read, it was a proof that he was in holy orders. The ancient use of the cross was therefore universal, and was the symbol of the faith of the sacred associations, as well as the mark generally adopted.

Nono slavery was introduced into the present territory of the United States during the reign of Queen Elizabeth, by merchants of Liverpool, England. On the 21, 1865, the United States Congress submitting to the States for their approval and ratification the following amendment to the constitution: "Article XIII. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction." On Dec. 18, 1865, the Secretary of State issued his proclamation declaring that this amendment had been approved by the Legislatures of Illinois, Rhode Island, Michigan, New York, West Virginia, Maine, Kansas, Massachusetts, Pennsylvania, Missouri, Ohio, Nevada, Indiana, Louisiana, Minnesota, Wisconsin, Vermont, Tennessee, Arkansas, Connecticut, New Hampshire, South Carolina, Alabama, North Carolina, and Georgia—in all, 27 out of 36 States, and was consequently adopted.

Severely Dry Times. An in-estimating record is that of severe droughts, as far back as the landing of the Pilgrims. How many thousands of times are observations made like the following: "Such a cold season!" "Such a hot season!" "Such wet weather!" "Such dry weather!"

European Rapacity—Chinese Moderation. If Europeans, in truth, understood the duties resulting from the five relationships, then we should discern the effects in their lives. Love between prince and minister, between father and son, between husband and wife, friend and friend would bring due subordination and careful fulfillment of relative duties; peace and order would reign in their homes, and the world would be a better place.

Why He Was in the Penitentiary. An important case was tried before the Criminal Court of the District of Columbia. An old colored man was on the witness stand. The District Attorney interrogated the witness: "What is your name?" "John Williams, sah." "Are you the John Williams who was sent to the Albany State penitentiary for larceny?" "No, sah—not this John." "Are you the John Williams who was convicted of arson, and sent to the Baltimore penitentiary?" "No, sah." "Tired of asking fruitless questions, the District Attorney suddenly put a leading question to the witness: "Have you ever been in the penitentiary?" "Yes, sah." "All eyes were now turned upon the witness. The District Attorney smiled complacently, and resumed: "How many times have you been in the penitentiary?" "Twice, sah." "Where?" "In Baltimore, sah." "How long were you there the first time?" "About two hours, sah." "How long the second time?" asked the attorney, rather crossly. "An hour, sah. I went there to whitewash a wall, and a lawyer who had robbed his client."

A Curious Lake. The density of the water of Lake Mono is remarkable, being just the reverse of that of Lake Tahoe, in which the body of a drowned person never returns to the surface. For bitterness and promiscuous meanness the waters of this lake surpass those of the Dead Sea. They contain so much alkali that on a windy day the lake registers a wind of later five feet thick along the whole water's surface. Occasional waves would take up a bunch of this alkali as big as a bushel basket and carry it several hundred feet inland. So buoyant are the waters of the lake that quite a party of men, occupying the waves, could walk on the water.

This Monticello Wine Company, of Charlottesville, Va., has just sold to a New York firm ten thousand gallons of wine of their manufacture, some thousand gallons of Virginia claret, and one thousand gallons of claret, the whole to be delivered by the first of September.

BITS OF INFORMATION.

Tolls were first paid by vessels passing the slide on the river Elbe, 1102, in England, toll-boats being ordered in 1267, a penny being asked for every wagon that passed through a certain manor, and the first regular toll was collected a few years later for mendicant roads in London, between St. Giles and Temple Bar.

The invention of music is uncertain. Lucretius ascribes it to the whistling of the winds in hollow reeds. Enchiridion to the various sounds produced by the hammers of Tubal Cain; Camelon Ponticus, and others to the singing of birds. And Zarlino to the sound of water. It is, however, agreed that music was first reduced to rules by Jubal, 1800 B. C.

The average duration of vitality in seeds of some of our cultivated plants is as follows: Artichoke, five years; broad bean, six; beet root, five; cabbage, five; carrot, four; cucumber, five; lettuce, five; maize, two; melon, five; onion, two; pea, four; radish, five; spinach, five; tomato, five; turnip, five; egg plant, seven; endive, nine; parsley, three; strawberry, three.

There is another saying as common as "potatoes and point." To one asking why he can't get on, it is usually answered very cleverly as, "Bread and pull." "Let's have it, then," says he. "A large lump of bread is set on the table and he asks for the children. "Chicken pulled," why, then, it is. "Why, he's pulled it bread." "Well, pull it, and then you'll have bread and pull."

Newspapers. From a newspaper directory published in New York we learn that 9,723 newspapers are published in the United States. Of these journals, 1,885 are Democratic, 1,747 Republican, and 123 Greenback. The number of political papers printed in each State and Territory is as follows:

Table listing the number of newspapers in various states and territories, including New York, Pennsylvania, Ohio, etc.

Secure a Home.

Home is the great power that rules the civilized man; and one of the most fortunate things in our condition as a free, self-governing people is the prominence given to the beautiful sentiment of home. The only way we can secure it is by placing emphasis on the possession of liberty, exact the claims of home, and stimulate men to seek its calm and elevating pleasure. Most of our people, they place home within their reach. A country like ours encourages the domestic affections; for here industry is sure of its reward; and the honest man, who has a few weary limbs, and the tranquil enjoyment of the fireside are open to all who desire to experience them. The influence of this fact is beyond calculation; it has done more to expand the territory, develop the resources and enrich the wealth of our nation than anything else.
